## RESEARCH EXPERIENCE

---

**USC Information Science Institute** 2022.6 - Present  
*PhD Student, Advised by Prof. Mohammad Rostami*

- Conducted research on machine learning in data-scarce scenarios with theoretical analysis, focusing on transfer learning, domain adaptation, continual learning, zero-shot learning, and few-shot learning.

**NYU Multimedia and Visual Computing Lab** 2021.3 - 2022.5  
*Research Assistant, Advised by Prof. Yi Fang*

- Conducted research on geometric-aware adversarial training methods for 3D point cloud completion.
- Designed a novel adversarial attack method that constrains adversarial perturbations with absolute minimum curvature direction of original data and published the results on ICPR 2022.

**NYU Algorithms and Foundations Group** 2020.6 - 2022.4  
*Research Assistant, Advised by Prof. Yi-Jen Chiang and Prof. Christopher Musco*

- Conducted research on in situ selection of key time steps for high dimensional time-varying data.
- Developed a new greedy algorithm with numerical linear algebra techniques to compute linear interpolation solutions and errors in an online streaming fashion and published the results on EuroVis 2022.

## WORK EXPERIENCE

---

**Huawei**

2021.9 - 2022.5

*Algorithm Engineer, Network AI Engine Department*

- Developed intelligent systems to detect fire, smoke, and helmet in 2D images captured from cameras on construction sites.
- Adjusted and trained the state-of-the-art 2D object detection models (e.g., YOLOR, YOLOX).
- Integrated detection models with techniques such as Knowledge Distillation and Memory Replay to enable class-incremental learning.
